Physicians are hindred in fighting the disease because of the lack of exact knowledge of the disease. The exact period of incubation is not known and to make the period as definite as possible it has been placed

at three weeks by the experts who are fighting the disease in New York. That the period of incubation extends over several days is evident from the case of the Brod child which died at the Memorial hospital

This was several days before the medical inspection of children coming from New York and the in-fected districts was started by the

health department.

The child had been in apparently good health during its stay until Tuesday afternoon when it became suddenly ill. Dr. E. A. On account of the increase in cases in New York city and also in view of the fact that the epidemic is srowing in New Jersey, that more and more cases are appearing in Connecticut and because of the discovery of two cases in Montville, just a fow miles south of this city, it is felt by Dr. Brophy and by other health officers of the county that more stringent methods should be followed. Dr. Brophy said Wednesday night that there are no cases in Norwich now but he doesn't intend to wait until the disease appears in this city. His theory is "anfety first" and his intention is to keep the disease out of Norwich.

With this end in view he called up Health Officer Chipman of New London like stand they all agreed to meet at Dr. Fox's office in Montville wedlenday afternoom at 4 o'clock to discuss the situation.
